

UGI Save Smart New Homes Program

Financial incentives are available for builders of new homes serviced by UGI Gas or UGI Penn Natural Gas.

The program offers two incentive tiers for builders of homes that exceed the minimum energy code.

With incentives measured by total MMBtu saved annually, the more builders save, the more they earn. Builders of qualifying homes can earn thousands of dollars with uncapped incentives.

For multifamily projects, builders can earn uncapped incentives per building with rebates issued on a per-unit basis.

Program participants are eligible to receive free technical trainings, marketing materials, and sales tools.

Tier 1: Code Plus

\$20 per MMBtu saved per home
Requires 30% savings over 2009 IECC*

Tier 2: ENERGY STAR 3.0

\$30 per MMBtu saved per home
Requires ENERGY STAR® V3.0 certification & 30% savings over 2009 IECC*

Average rebates awarded **per unit** to qualifying participants range by building type.

All homes must be inspected and verified by a certified HERS Rater to qualify for program incentives. ENERGY STAR®-certified homes must also complete all V3.0 checklists.

*The percent savings over code is determined in rating software using the UGI Save Smart New Homes report.

This report is customized for Pennsylvania and includes savings from high-efficiency HVAC, water heaters, and more.
